

Amendments to the Claims:

This listing of claims will replace all prior versions and listings of claims in the application:

Listing of Claims:

1. (previously presented) A method of processing data in a system including an utility, comprising the steps of:
 - starting a session;
 - selecting a file on a local drive or by URL, wherein the file includes a name of a business object;
 - uploading the file including the name of a business object to a server;
 - storing data of the file in a database of the utility;
 - delivering the data to the business object corresponding to the name uploaded to the server;
 - with the business object, performing a task on the delivered data, the task performing including invoking a code included in the business object, wherein the task comprises adding, deleting, or updating of the data delivered to the business object and wherein the code includes an interface to support an export operation; and
 - downloading and saving a report after the data processing is completed.
2. (canceled)
3. (previously presented) The method of processing data according to claim 1, wherein the code includes dolImport/Export.
4. (original) The method of processing data according to claim 3, wherein the dolImport/Export is a command to perform an operation.
5. (canceled)

6. (previously presented) The method of processing data according to claim 1, wherein the interface includes a code for throwing an attribute set returned by the business object.
7. (original) The method of processing data according to claim 1, wherein the utility is designed to process the file on the remote server.
8. (canceled)
9. (original) The method of processing data according to claim 1, wherein the session is for import and export operations.
10. (original) The method of processing data according to claim 1, wherein the starting of a session includes generating a unique session ID.
11. (original) The method of processing data according to claim 1, wherein the database of the utility includes a plurality of tables.
12. (original) The method of processing data according to claim 11, wherein the plurality of tables include a user name and session ID storing table, a session status storing table, an initial session data storing table, a result storing table, an error message storing table, and a session log storing table.
13. (original) The method of processing data according to claim 1, wherein the business object includes a code including a command which provides instance of the business object with an attribute.
14. (canceled)
15. (original) The method of processing data according to claim 1, wherein the business object includes a findByAttributes.
16. (original) The method of processing data according to claim 15, wherein the findByAttributes supports object references in the file.

17. (original) The method of processing data according to claim 1, wherein the business object includes a code that receives a list of validated object attributes and returns a unique object identifier.
18. (original) The method of processing data according to claim 1, wherein the business object includes a code for notifying an end of the data processing.
19. (canceled)
20. (canceled)
21. (original) The method of processing data according to claim 1, wherein the file is a text file including command lines, header lines, and data.
22. (original) The method of processing data according to claim 1, wherein the session is an export operation.
23. (original) The method of processing data according to claim 22, wherein the business object exports all of its data or part of the data.
24. (original) The method of processing data according to claim 22, wherein the business object calls an interface including a plurality of codes.
25. (original) The method of processing data according to claim 24, wherein the plurality of codes include a first code including a name of operation and a business object class name to be inserted into an output file.
26. (original) The method of processing data according to claim 24, wherein the plurality of codes include onReceiveExport.
27. (original) The method of processing data according to claim 26, the onReceiveExport is a code for throwing an attribute set returned by the business object.

28. (original) The method of processing data according to claim 1, wherein the utility is a deliverer of information.
29. (original) The method of processing data according to claim 1, wherein the data is changed without changing the business object.
30. (original) The method of processing data according to claim 1, wherein the utility includes a monitoring function, an error handling function, and reporting function.
31. (previously presented) The method according to claim 1, wherein the utility receives information from another system and loads information to the business object.
32. (previously presented) The method according to claim 1, wherein the utility receives information from the business object and stores information on another system.
33. (previously presented) A method of loading information to a network application, comprising:
 - providing a utility on a server for exporting and importing data to the network application;
 - associating a database with the utility;
 - with the utility, receiving a selection of an import file, the import file comprising data in a text file and including a name of a business object;
 - with the utility, uploading the data and the business object name from the selected import file, wherein the uploaded data is stored in the utility database;
 - operating the utility to invoke the business object associated with the business object name including delivering at least a portion of the uploaded data to the invoked business object, whereby the business object performs an operation on the delivered data; and

updating the data in the utility database based on the performance of the operation by the invoked business object.

34. (previously presented) The method processing data according to claim 1, further comprising after the delivering of the data, performing validation with the business object.

35. (canceled)
